Professional Summary

AI Automation Engineer with experience designing production AI systems combining LLMs, Python, APIs and workflow orchestration to automate recruitment, CRM, business operations and intelligent decision making. Built production workflows processing over 2,000 CVs/week, 10,000+ records and enterprise automation systems for an international company.

Experience

AI Automation Engineer & Systems Architect

Jan 2026 – May 2026

Nexus VP OÜ (PassBeyond / Greece Golden Visa)

- Designed, deployed, and maintained production AI automation systems spanning recruitment, CRM, lead generation, data processing, and internal business operations.
- Architected an AI-powered recruitment platform capable of processing over **2,000 CVs per week** across candidate pools exceeding **10,000 applications**, significantly reducing manual screening effort.
- Developed LLM-driven candidate evaluation pipelines integrating Hireflix interviews, structured scoring models, and automated decision-support workflows to streamline recruitment operations.
- Engineered intelligent resume parsing pipelines that automatically generated approximately **30 structured evaluation attributes** including competency scoring, credibility assessment, strengths, risk indicators, and hiring recommendations.
- Automated candidate ranking, evaluation, and reporting workflows, reducing an estimated **30–65+ hours** of manual review effort per week while supporting the onboarding of **40+ Relationship Managers**.
- Built an AI-powered analytics platform that processed and analyzed more than **10,000 student and market records**, enabling data-driven business expansion and market research.
- Integrated Zoho CRM with external APIs, business systems, and automated synchronization workflows to improve lead lifecycle management and operational efficiency.
- Developed AI-powered business assistant workflows using n8n, Supabase, vector embeddings, semantic retrieval, and LLM agents for context-aware task automation.
- Built WhatsApp Business API automation pipelines supporting lead engagement, follow-ups, and real-time customer communication.
- Developed automated property intelligence pipelines for collecting, enriching, validating, and structuring real-estate market data used in lead generation.
- Established production monitoring, logging, structured error handling, debugging, and QA processes across automation systems, improving deployment reliability and operational stability.
- Collaborated with engineering and business teams on automation architecture, API integrations, workflow design, and technical documentation to ensure maintainable production systems.

Selected Impact

- Delivered production AI automation systems that continue supporting business operations beyond the completion of the engagement.
- Automated high-volume recruitment workflows, accelerating candidate evaluation while improving consistency across hiring decisions.
- Reduced repetitive operational workload by replacing manual business processes with scalable AI-assisted automation pipelines.
- Improved CRM synchronization, reporting, and operational visibility through reliable API-driven workflow

orchestration.

- Enabled scalable processing of high-volume datasets through production-ready AI workflows, centralized reporting, and intelligent decision-support systems.

Graduate Teaching Assistant

Sept 2024 – Present

Indian Institute of Information Technology, Lucknow (IIIT Lucknow)

- Conducted laboratory sessions and assisted **200+ students** in Object-Oriented Programming and System Design coursework
- Supported students during debugging sessions, practical evaluations, and technical problem-solving discussions
- Assisted faculty in answer sheet evaluation, assignment checking, answer key verification, and online quiz assessments
- Helped coordinate lab activities, student evaluations, and academic support tasks as part of departmental teaching assistance responsibilities

Projects

Automated B2B SaaS Data Factory for Industry-Specific Content Generation

n8n, JavaScript, GPT-4, Airtable, Docker

 [GitHub Link](#)

- Designed and developed an automated workflow pipeline for generating industry-specific B2B SaaS content using structured AI-assisted processing
- Built scalable n8n workflows with modular execution logic, structured data handling, and fallback-based processing for improved workflow reliability
- Integrated GPT-4 with structured JSON-based outputs for controlled content generation, normalization, and downstream processing
- Used Airtable as a centralized knowledge repository for storing and organizing generated outputs, and containerized the workflow environment using Docker
- Reduced repetitive manual content preparation effort through workflow automation and standardized AI-assisted generation pipelines

Enterprise AI Control Plane for Autonomous Decision Systems

Python, FastAPI, OpenAI API, n8n, Supabase, PostgreSQL, Slack

 [GitHub Link](#)

- Developed an AI governance and orchestration platform for managing automated decision workflows with configurable confidence thresholds
- Built event-driven integrations between Python services, n8n workflows, and external communication systems using Slack-based alerting
- Implemented audit logging, human review escalation workflows, and confidence-aware automation logic for controlled AI execution
- Designed feedback-driven workflow mechanisms to support iterative evaluation and refinement of AI-assisted decisions
- Improved operational visibility and reduced repetitive engineering effort through centralized workflow monitoring and automation

Autonomous MLOps Orchestration Platform

Python, n8n, MLflow, CI/CD, Model Registry

 [GitHub Link](#)

- Built an automated MLOps workflow for model retraining, evaluation, version tracking, and deployment orchestration

- Implemented validation checks, approval stages, and rollback mechanisms to support safer and traceable model deployment processes
- Integrated CI/CD-style workflow automation to streamline model lifecycle management and reduce repetitive manual operational tasks
- Developed structured deployment pipelines with monitoring-oriented workflow design for improved maintainability and reproducibility

Skills

Languages	Python, JavaScript, SQL, Bash, C++
AI & LLM Systems	OpenAI API, Claude API, LLM Pipelines, AI Agents, Prompt Engineering, Structured Outputs, Vector Embeddings, Semantic Search, AI-Assisted Decision Systems
Automation & Integration	n8n (Production), Workflow Orchestration, REST APIs, Webhooks, Event-Driven Automation, CRM Automation, WhatsApp Business API, Google Sheets API
Backend & Data	FastAPI, Supabase (PostgreSQL), JSON Processing, Data Pipelines, Data Scraping, Airtable, MLflow
DevOps & Tools	Docker, Git, Linux, Postman, VS Code, Workflow Monitoring, Logging, Error Handling, Production Debugging, Technical Documentation

Education

Indian Institute of Information Technology, Lucknow (IIIT Lucknow)	July 2024 – July 2026
M.Tech in Computer Science & Engineering (AI & ML) CGPA: 7.3	
Graphic Era Deemed to be University, Dehradun	July 2020 – July 2024
B.Tech in Computer Science & Engineering CGPA: 8.33	

Examinations & Academic Distinction

Graduate Aptitude Test in Engineering (GATE CSE 2024)	GATE Score: 505 All India Rank: 5303
